Transitions and Anim...

Instruction

CSS allows you to implement transitional animations that can work over multiple properties. In this exercise, you'll style the three buttons that you see on the page. The objective is to implement a subtle animation effect when the user hovers the mouse pointer over a button. This naturally calls for the use of the :hover selector.

1. Open the src/styles.css file. You'll notice the base styles which render the three buttons on the page. The first thing to do is to add the transition property on the .btn class which equips the listed properties for transitional animation. Add the following to the .btn ruleset

```
transition: top 0.5s, left 0.5s, box-shadow 1s ease, background-color 1s ease;
```

2. Next, using the :hover selector, slightly modify the top, left, box-shadow and background-color properties as shown below.

```css
.btn:hover {
  top: 1px;
  left: 1px;
  box-shadow: 3px 3px 0px rgb(0, 0, 0);
  background-color: rgb(255, 111, 111);
}
```

3. That's it. Try hovering your mouse over the buttons to watch the transitions in action.
